

5 technology trends that will shape 2020

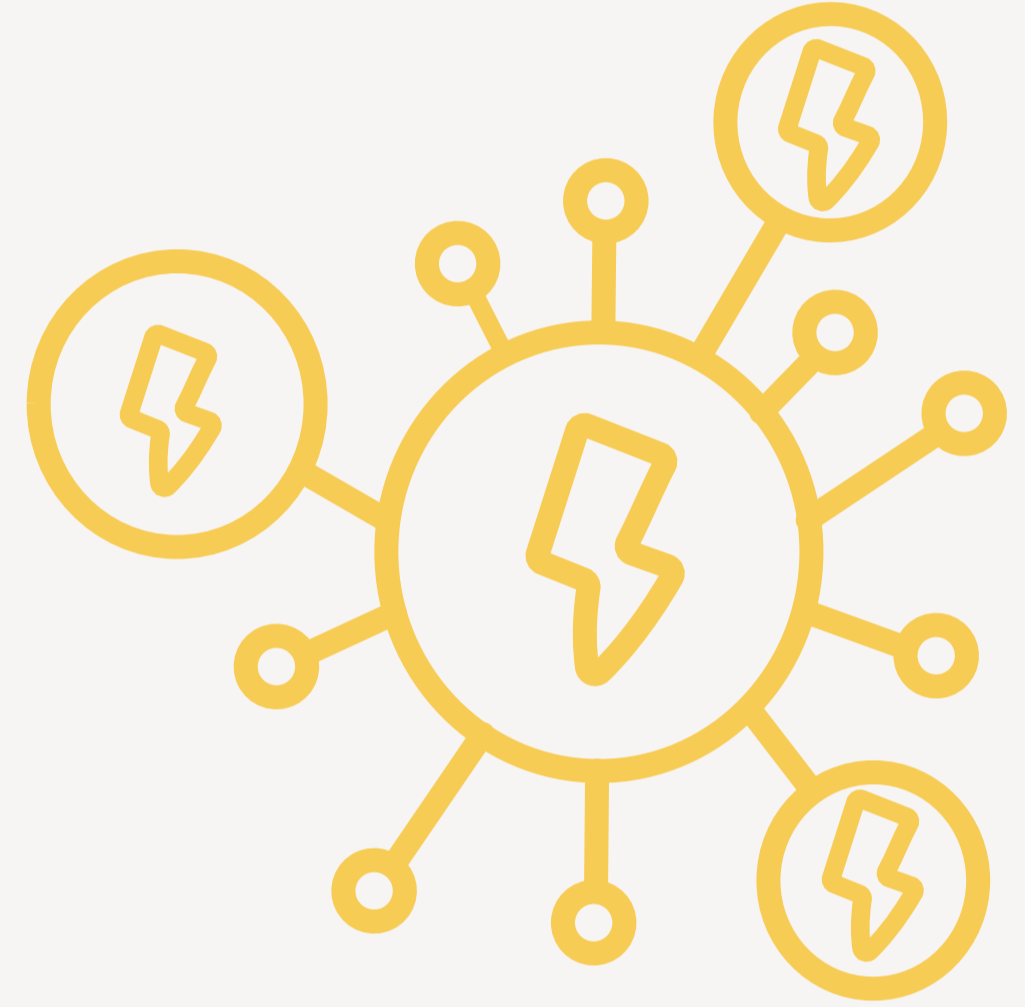

Computing at the 'edge'

We see move towards more processing of data and analysis at the edge of the network.

Processing power in dedicated devices

Connected devices will need increased computing power and be designed for the specific application from the silicon up.

The trusted edge

Trust through the entire supply chain is becoming increasingly more vital. The edge will be the point where this trust is established.

Regulation of technology use cases

The industry will need to navigate the dynamic landscape of use cases and business ethics when it comes to the grey areas of personal privacy in technology.

Network diversity

While the internet and public cloud services will remain part of how we transfer, analyse and store data, many will move towards relying on private clouds due to rising concerns of privacy issues.
